The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/533,859

Applicant(s)

KAGIWADA, YOSHIMITSU

Examiner

BRYAN WRIGHT

Art Unit

2131

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on January 26, 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-16 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-16 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 05 May 2006 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-8508)
- Paper No(s)/Mail Date _____

- 4) ☐ Interview Summary (PTO-413)
- Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

1. This action is in response to the original filing of January 26, 2006. Claims (1-16) are pending and have been considered below.

Double Patenting

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claim 1 is provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claim 1 of copending Application No. 10/536548. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Matsui et al. (US Patent Publication No. 2002/0019817 and Matsui hereinafter (cited from IDS)).

3. As to claim 1, Matsui teaches a **personal information utilization system comprising:**

a personal information storage means (i.e., ... teaches a database containing personal information [6, fig. 1]), **a communication means** (i.e., internet) **to an external device** (i.e., ... teaches internet communication [1, fig. 1]), **and an information processing means for controlling operation of each means thereof** (i.e., ... teaches an ISP configured with a computer system, database, and Web browser [2, fig. 1; fig. 4]);

said personal information storage means storing not only personal information on an information disclosing person but also storing commodity provision information, etc. on commodity service which is provided for said information disclosing person for each information disclosing person of said personal information (i.e., ... teaches database containing personal information also stores service related data [10, fig. 1]);

and said processing means being constituted by the following steps: a) receiving personal information on an information disclosing person

from an information search side terminal via said communication means (i.e., ... teaches a Web browser configuration for receiving personal information [fig. 4; fig. 7]),
b) checking said received personal information with personal information stored in said personal information storage means (i.e., ... teaches a verification process [21-32 fig. 3]), **c) identifying an information disclosing person of said received personal information, as a result of said checking, if said received personal information coincides with the personal** (i.e., ... teaches the use of a password and user id assigned for identification [0049 - 0051]). **A personal information utilization system comprising: a personal information storage means** (i.e., 6, fig. 1), **a communication means to an external device, and an information processing means for controlling operation of each means thereof** [fig. 1];

said personal information storage means storing not only personal information on an information disclosing person but also storing commodity provision information, etc. on commodity service which is provided for said information disclosing person for each information disclosing person of said personal information (i.e., ... teaches database containing personal information also stores service related data [10, fig. 1]);

and said processing means being constituted by the following steps: a) receiving personal information on an information disclosing person from an information search side terminal via said communication means (i.e., ... teaches a Web browser configuration for receiving personal information [fig. 4; fig. 7]),

b) checking said received personal information with personal information stored in said personal information storage means (i.e., ... teaches a verification process [21-32 fig. 3]), **c) identifying an information disclosing person of said received personal information** (i.e., ... teaches the use of a password and user id assigned for identification [0049 - 0051]), **as a result of said checking, if said received personal information coincides with the personal information stored in said personal information storage means** (i.e., ... teaches upon matching criteria [par. 55]), **d) reading out** (i.e., display) **commodity provision information, etc. on said identified information disclosing person from said personal information storage means** (i.e., ... teaches displaying information retrieved from storage [par. 55]), **e) transmitting said read out commodity provision information, etc. to said information search side terminal** (i.e., ... teaches a sending a report base query information provided [par. 56]).

4. As to claim 2, Matsui teaches a **personal information utilization system comprising:**

a personal information storage means, a communication means to an external device, and an information processing means for controlling operation of each means thereof (i.e., ... teaches database storage, internet communication and computer system for processing [fig. 1]);

said personal information storage means not only storing personal information on an information disclosing person but also storing commodity

provision information, etc. on commodity service which is provided for said information disclosing person for each information disclosing person of said personal information (i.e., ... teaches a database storage storing personal information and service related information [6, fig. 2]);

and said processing means being constituted by the following steps: a) receiving information included in commodity provision information (i.e., teaches information entered via web browser [fig. 4; fig. 5]), **etc. from an information search side terminal via said communication means** (i.e., ... teach a search configuration for searching [fig.6]), **b) checking said received information included in the commodity provision information, etc. with commodity provision information, etc. stored in said personal information storage means** (i.e., ... teaches performing a search based information receive with stored information [fig. 6]), **c) identifying an information disclosing person associated with said commodity provision information** (i.e., ... teaches identifying a person matching said information [par. 55]), **etc., as a result of said checking, if said received information included in the commodity provision information, etc. partially or completely coincides with the commodity provision information, etc. stored in said storage means** (i.e., ... teaches performing a search relative to designated service information received [0056]), **d) reading out one or more personal information on said identified information disclosing person or persons from said personal information storage means** (i.e., ... teaches displaying said result of search [fig. 6]), **e) transmitting said read out personal information on the information disclosing person or**

persons to said information search side terminal (i.e., ... teaches a sending a report base query information provided [par. 56]).

5. As to claim 3, Matsui teaches a **personal information utilization system where the commodity provision information, etc. registered in said personal information storage means is such information that said processing means associates personal information of said information disclosing person and commodity provision information, etc., and receives said associated information from an information register side terminal via said communication means** (i.e., ... teaches registration process [15- 21,fig. 3] Further teaches a personal information associated with service data [18, fig. 3]), **checks said received personal information with personal information stored in said personal information storage means** (i.e., ... teaches a verification process (i.e., password and user id) [22-24, fig. 3]);

identifies the information disclosing person of said received personal information, as a result of said checking, if said received personal information coincides with the personal information stored in said personal information storage means (i.e., ... teaches a verification process (i.e., password and user id) [22- 24, fig. 3]);

and registers said commodity purchasing information, etc. received for each identified information disclosing person in said personal information storage means (i.e., ... teaches a registration and enrollment process [16 -21, 25 fig. 3]).

6. As to claim 4, Matsui teaches a **personal information utilization system wherein said information searching person includes at least a manufacture, a sales vendor, a service trader, a self-governing body or an education foundation** (i.e., ... teaches search criteria [a, b, fig. 5]).

7. As to claim 5, Matsui teaches a **personal information utilization system where the personal information on the information disclosing person registered in said personal information storage means is such information that the processing means is allowed to receive information on disclosure limits representing disclosure limits for the personal information on the information disclosing person, from the information disclosure side terminal via the communication means and that the personal information storage means is allowed to manage in accordance with the received information on disclosure limits** (i.e., ... teaches a web browser [fig.4] Further teaches said web browser displaying limited personal information required for search).

8. As to claim 6, Matsui teaches a **personal information utilization program which is used for a personal information utilization system comprising: a personal information storage means** (i.e., ... teaches a database containing personal information [6, fig. 1]), **a communication means** (e.g., internet) **to an external device** (i.e., ... teaches internet communication [1, fig. 1]), **and a information processing**

means for controlling operation of each means thereof (i.e., ... teaches an ISP configured with a computer system, database, and Web browser [2, fig. 1; fig. 4]);

said personal information storage means storing not only personal information on an information disclosing person but also commodity provision information, etc. on commodity service which is provided for said information disclosing person for each information disclosing person of said personal information (i.e., ... teaches database containing personal information also stores service related data [10, fig. 1]);

wherein said processing means is allowed: a) to receive personal information on an information disclosing person from an information search side terminal via said communication means (i.e., ... teaches a Web browser configuration for receiving personal information [fig. 4; fig. 7]), **b) to check said received personal information with personal information stored in said personal information storage means** (i.e., teaches search configuration for retrieving received information from storage [fig. 6]), **c) to identify an personal information disclosing person of said received personal information** (i.e., ... teaches the use of a password and user id assigned for identification [0049 - 0051]), **as a result of said checking, if said received personal information coincides with the personal information stored in said personal information storage means** (i.e., ... teaches upon matching criteria [par. 55]), **d) to read out commodity provision information, etc. on said identified information disclosing person from said personal information storage means** (i.e., ... teaches displaying information retrieved from storage [par. 55]), **e) to**

transmit said read out commodity provision information, etc. to said information search side terminal (i.e., ... teaches a sending a report base query information provided [par. 56]).

9. As to claim 7, Matsui teaches a **personal information utilization program which is used for a personal information utilization system comprising: a personal information storage means** (i.e., ... teaches a database containing personal information [6, fig. 1]), **a communication means** (e.g., internet) **to an external device** (i.e., ... teaches internet communication [1, fig. 1]), **and an information processing means for controlling operation of each means thereof** (i.e., ... teaches an ISP configured with a computer system, database, and Web browser [2, fig. 1; fig. 4]);

said personal information storage means storing not only personal information on an information disclosing person but also commodity provision information, etc. on commodity service which is provided for said information disclosing person for each information disclosing person of said personal information (i.e., ... teaches database containing personal information also stores service related data [10, fig. 1]);

wherein said processing means is allowed: a) to receive information included in commodity provision information, etc. from an information search side terminal via said communication means (i.e., ... teaches a Web browser configuration for receiving personal information [fig. 4; fig. 7]), **b) to check said received information included in the commodity provision information, etc. with**

commodity provision information, etc. stored in said personal information storage means (i.e., teaches search configuration for retrieving received information from storage [fig. 6]), **c) to identify an information disclosing person associated with said commodity provision information** (i.e., ... teaches the use of a password and user id assigned for identification [0049 - 0051]), **etc., as a result of said checking, if said received information included in the commodity provision information, etc. partially or completely coincides with the commodity provision information, etc. stored in said storage means** (i.e., ... teaches upon matching criteria [par. 55]), **d) to read out** (i.e., display) **one or more personal information on said identified information disclosing person or persons from said personal information storage means** (i.e., ... teaches displaying information retrieved from storage [par. 55]), **e) to transmit said read out personal information on the information disclosing person or persons to said information search side terminal** (i.e., ... teaches a sending a report base query information provided [par. 56]).

10. As to claim 8, Matsui teaches a **personal information utilization program where the commodity provision information, etc. registered in said personal information storage means is such information that said processing means is allowed to associate personal information of said information disclosing person and commodity provision information, etc** (i.e., ... teaches a storage (i.e., database) contain personal information and associated service information [6, fig. 2]);

and to receive said associated information from the information register side terminal via said communication means (i.e., ... teaches a Web browser configuration for receiving personal information [fig. 4; fig. 7]);

to check said received personal information with personal information stored in said personal information storage means (i.e., ... teaches the use of a password and user id assigned for identification [0049 - 0051];

to identify an information disclosing person of said received personal information as a result of said checking, if said received personal information coincides with the personal information stored in said personal information storage means (i.e., ... teaches upon matching criteria [par. 55]);

and to register said commodity purchasing information, etc. received for each identified information disclosing person in said personal information storage means [18, fig.3].

11. As to claim 9, Matsui teaches a **personal information utilization program where said information searching person includes at least a manufacturer, a sales vendor, a service trader, a self-governing body or an education foundation** [a, b, fig. 5].

12. As to claim 10, Matsui teaches a **personal information utilization program where the personal information on the information disclosing person registered in said personal information storage means is such information that the**

processing means is allowed to receive information on disclosure limits representing disclosure limits for the personal information on the information disclosing person, from the information disclosure side terminal via the communication means and that the personal information storage means is allowed to manage in accordance with the received information on disclosure limits (i.e., ... teaches a web browser [fig.4] Further teaches said web browser displaying limited personal information required for search).

13. As to claim 11, Matsui teaches a **personal information utilization system where the commodity provision information, etc. registered in said personal information storage means is such information that said processing means associates personal information of said information disclosing person and commodity provision information, etc.** (i.e., ... teaches a storage (i.e., database) contain personal information and associated service information [6, fig. 2]), **and receives said associated information from an information register side terminal via said communication means** (i.e., ... teaches a web browser [fig. 4] Further teaches registration user screen [15, fig. 3]);

checks said received personal information with personal information stored in said personal information storage means (i.e., ... teaches the use of a password and user id assigned for identification [0049 - 0051]);

identifies the information disclosing person of said received personal information, as a result of said checking, if said received personal information

coincides with the personal information stored in said personal information storage means (i.e., ... teaches upon matching criteria [par. 55]);

and registers said commodity purchasing information, etc. received for each identified information disclosing person in said personal information storage means [18, fig.3].

14. As to claim 12, Matsui teaches a **personal information utilization system where said information searching person includes at least a manufacture, a sales vendor, a service trader, a self-governing body or an education foundation** [a, b, fig. 5].

15. As to claim 13, Matsui teaches a **personal information utilization system where the personal information on the information disclosing person registered in said personal information storage means is such information that the processing means is allowed to receive information on disclosure limits representing disclosure limits for the personal information on the information disclosing person, from the information disclosure side terminal via the communication means and that the personal information storage means is allowed to manage in accordance with the received information on disclosure limits** (i.e., ... teaches a web browser [fig.4] Further teaches said web browser displaying limited personal information required for search).

16. As to claim 14, Matsui teaches a **personal information utilization program where the commodity provision information, etc. registered in said personal information storage means is such information that said processing means is allowed to associate personal information of said information disclosing person and commodity provision information, etc.** (i.e., ... teaches a storage (i.e., database) contain personal information and associated service information [6, fig. 2]);

and to receive said associated information from the information register side terminal via said communication means (i.e., ... teaches a Web browser configuration for receiving personal information [fig. 4; fig. 7]);

to check said received personal information with personal information stored in said personal information storage means (i.e., ... teaches the use of a password and user id assigned for identification [0049 - 0051]);

to identify an information disclosing person of said received personal information as a result of said checking, if said received personal information coincides with the personal information stored in said personal information storage means (i.e., ... teaches upon matching criteria [par. 55]);

and to register said commodity purchasing information, etc. received for each identified information disclosing person in said personal information storage means [18, fig.3].

17. As to claim 15, Matsui teaches a **personal information utilization program where said information searching person includes at least a manufacturer, a**

sales vendor, a service trader, a self-governing body or an education foundation
[a, b, fig. 5].

18. As to claim 16, Matsui teaches a **personal information utilization program where the personal information on the information disclosing person registered in said personal information storage means is such information that the processing means is allowed to receive information on disclosure limits representing disclosure limits for the personal information on the information disclosing person, from the information disclosure side terminal via the communication means and that the personal information storage means is allowed to manage in accordance with the received information on disclosure limits** (i.e., ... teaches a web browser [fig.4] Further teaches said web browser displaying limited personal information required for search).

Prior Art Made of Record

19. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
